PROFESSIONAL SUMMARY

Junior QA Engineer with about 7 months of professional experience testing a live multi-tenant SaaS platform used by MTN, Vodacom, Telkom and Cell C, plus a 2025 software development internship where I built and tested software projects. Skilled in manual and mobile testing, functional testing, regression testing, user acceptance testing (UAT), REST API testing with Postman and Swagger, test case design, and building my test automation skills with Playwright. I write detailed test cases and daily test reports. A software development background in React, Node.js, C# and .NET helps me find edge cases, reproduce defects accurately and write bug reports developers can act on quickly.

TECHNICAL SKILLS

Testing: Manual Testing, Mobile Testing, Functional Testing, User Acceptance Testing (UAT), API Testing (REST), Test Case Design, Test Reporting, Bug Reporting

Test Tools: Postman, Swagger, Chrome DevTools, Playwright (learning)

Databases: SQL (MySQL, PostgreSQL), MongoDB

Development: JavaScript, React, Node.js, C#, .NET (in progress)

Tools: Git, GitHub, VS Code, Airbyte, n8n

Soft Skills: Problem Solving, Critical Thinking, Technical Communication, Collaboration, Time Management, Adaptability

PROFESSIONAL EXPERIENCE

QA Tester / Software Developer Intern | YellowDot SA, Johannesburg **March 2026 to Present**

Mobile technology company delivering trivia, gaming, video, subscription and SMS/USSD services to MTN, Vodacom, Telkom and Cell C subscribers.

- Test the Service Delivery Platform, a multi-tenant SaaS system for the company to manage tenants, services, campaigns, affiliates, subscriptions and billings.
- Perform API testing on backend endpoints for campaigns, tenant permissions and service management using Postman and Swagger, validating response correctness.
- Run daily functional and regression testing on live trivia games, including manual testing on mobile phones, and deliver daily test reports.
- Write and maintain test cases covering functional flows.
- Reproduce, report and track defects through to resolution, working closely with frontend and backend developers.
- Contribute to full-stack development on the same platform using React, Node.js and .NET.

Key QA Projects

- UAT, Service Delivery Platform: Led user acceptance testing before release, validating service creation, campaign setup and linking of network operators, content providers and affiliates against stakeholder requirements.
- UAT, Trivia Game Subscriptions: Tested opt-in and opt-out journeys, billing, subscription status and confirmation messages for MTN, Vodacom, Telkom and Cell C before each network went live.
- Playwright Test Automation, Trivia Games: Completed a Playwright project that automates testing of the trivia games, while continuing to learn the tool.
- Tenant Permissions API: Tested tiered permissions (view-only to full control) end to end, validating create, list, view and revoke operations against a live database, including access upgrades and revocations, from staging through to production.
- Campaigns Feature: Tested campaign creation, operator, content provider and affiliate linking, budgets and campaign profile tracking, with test cases for valid and invalid inputs and edge cases before sign-off.
- SMS Campaign, World Cup Trivia Predictor: Built and tested a Node.js batch processing system for an SMS campaign reaching over 200,000 MTN subscribers, checking phone number validation, de-duplication, subscriber segmentation (active, grace and suspended) and delivery through an internal SMS Kannel gateway.
- Failed-Job Alerting: Built an automated alert pipeline (Airbyte, n8n, Microsoft Graph) that emails the data team when an ingestion job fails, replacing manual pipeline monitoring.

PROFESSIONAL EXPERIENCE (CONTINUED)

Software Developer Intern | Compuways (in partnership with Code College) **January 2025 to December 2025**
South African IT recruitment company, partnered with Code College for IT training.

- Built and tested software projects as part of a development team, as well as on my own.
- Tested projects myself and with my team, including API testing with Postman and Swagger.
- Used Chrome DevTools to investigate and debug issues in the browser.
- Used documentation to guide building and testing.

PROJECTS

VibeMetrics **2026 to Present**

- Automated reporting tool for South African social media freelancers and agencies, pulling Facebook and Instagram performance data via the Meta Graph API and generating client reports with the Claude API.
- Technologies: Node.js, React, TypeScript, PostgreSQL, Paystack

Supply Chain API with Role-Based Security **November 2025**

- REST API with role-based access control for Admins, Suppliers, Warehouse Managers and Customers, covering user management, inventory and order flows.
- Tested the API endpoints with Postman, including role-based access for each user type.
- Technologies: Java, Spring Boot, PostgreSQL, Flyway

EDUCATION

Full Stack Software Development Bootcamp | Code College **January 2025 to November 2025**
Certificates: Intro to Programming, Python, HTMX, Node.js, React, MERN, SQL, Java (Beginner and Advanced), Spring Framework, Java Bootcamp, Web Development Bootcamp

National Senior Certificate | Sutherland High School **2021**
